

TRUCK

The evolution of remote diagnosis
for commercial vehicles

TEXA

e TRUCK

is an innovative miniaturised tool that, for the first time, takes heavy duty truck workshops into a new diagnostic dimension thanks to the possibility to **constantly monitor the status of the vehicle remotely**, to **manage the servicing from a predictive point of view** and, the latest new feature, to **perform adjustment functions** that allow you to restore the vehicle's optimal conditions.

eTRUCK, which is installed in the vehicle's diagnostic socket* and configured within minutes, acts as a conjunction element between the repairer and the heavy duty vehicle, helping increase customer loyalty thanks to a constant and absolutely competent assistance service.

eTRUCK represents the ideal solution even for **drivers** and **fleet managers**, as it constantly keeps them updated on the conditions of their vehicles and allows them to carry out actions aimed at reducing costs and optimising the use of the vehicles, thanks to a dedicated app and management portal.

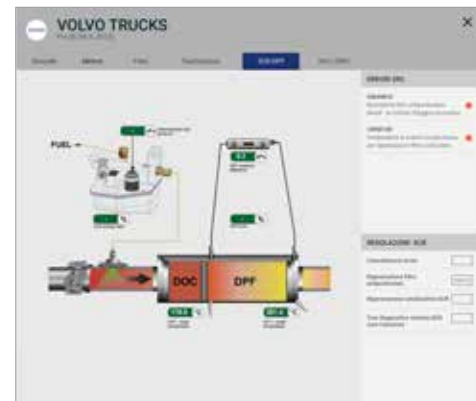

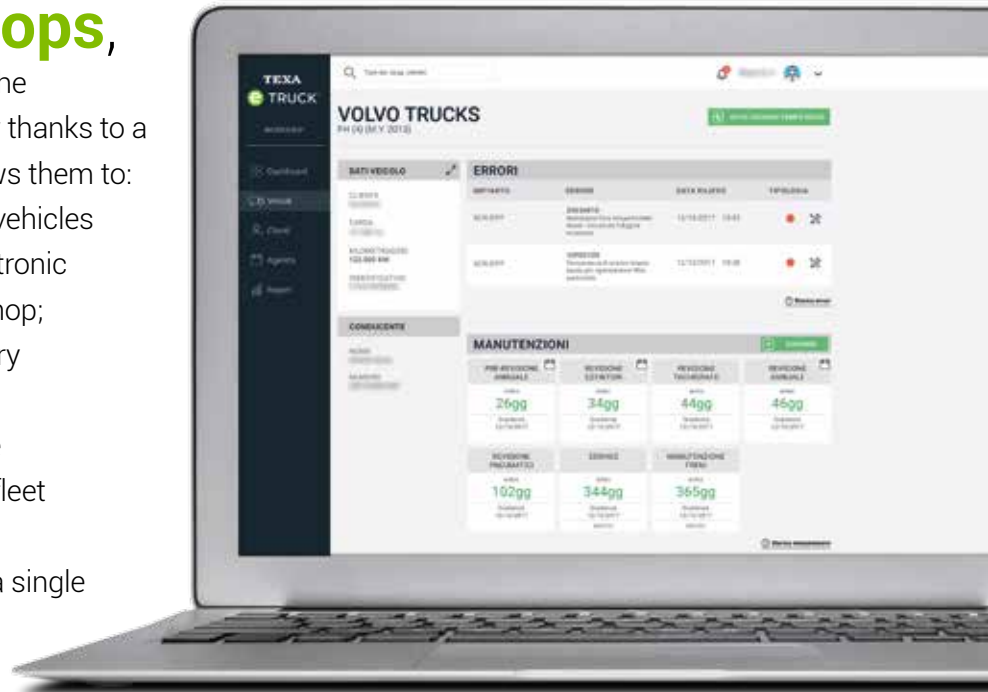

* 16 PIN OBD or Deutsch 9 PIN through special adapter for HD American Trucks.

Advantages in using TRUCK

For **TEXA workshops**, through the Workshop Portal, there is the possibility to increase customer loyalty thanks to a highly professional service, which allows them to:

- Constantly monitor the status of the vehicles remotely and to intervene on the electronic systems as if they were in the workshop;
- Manage the ordinary and extraordinary maintenance in advance;
- Share an appointment planner for the maintenance with the driver and the fleet manager;
- Manage the customer portfolio with a single software program;
- Create a detailed customer profile.

For the **drivers**,

thanks to an APP* that supplies very useful information while driving the vehicle, it is possible to:

- Read the Tachograph data in real time;
- Monitor your driving style;
- Fill out a Driver's Daily Vehicle Check & Defect Report list as required by the regulations of certain countries;
- Read the vehicle data in real time;
- Have a remote vehicle diagnosis available that helps solving any fault quickly, avoiding having to go to the workshop;
- Consult the service calendar shared with the workshop.

* For Android and iOS

The **fleet manager**

through the Fleet Manager Portal, can:

- Check the entire fleet regarding the status of the vehicles at a maintenance level;
- Assist remotely, through the diagnosis and the solution of possible vehicle faults by the workshop, reducing costs and increasing efficiency;
- Monitor the status of the maintenance of the vehicles and their expirations;
- Share an appointment planner for the maintenance with the workshop;
- Detect each driver's driving style;
- Download the Tachograph data remotely;
- Download remotely, directly from the ECU, the Trip Data Recorder, allowing detailed analyses of the use of the vehicle.
